

KPI'S Analysis

Total Movies

47

insights of Total Movies:-

*. The dataset consists of 47 movies, indicating a **focused and manageable sample size** for analysis.

Business Insights:-

The dataset contains 47 movies, which provides a balanced sample for analysis. It is large enough to identify meaningful patterns, yet small enough to deeply evaluate each movie's performance. From a business perspective, this allows better decision-making, helps identify key success factors, and supports a quality-focused strategy rather than just volume-based production."

Total Budget

10bn

Insights of Total Budget:-

The total budget of 10 billion indicates a **high level of investment** across the 47 movies.

Business Insights:-

The total budget of 10 billion highlights the scale of investment in the movie portfolio. While this reflects strong production capability, it also introduces significant financial risk. The analysis suggests that budget alone does not guarantee success, making it important to focus on ROI and optimize budget allocation across movies

KPI'S Insights:-

Total Revenue

39bn

Insights of Total Revenue:-

Strong Overall Performance:-

"The total revenue of 39 billion indicates a **high-performing movie portfolio**.

Revenue vs Budget Comparison

• Total Budget = 10 Billion

• Total Revenue = 39 Billion

So:- Revenue is ~3.9x of Budget

"The portfolio generated nearly 4 times the investment."

Avg_Rating

6.57

Insights of Avg_Rating:-

An average rating of 6.57 indicates that most movies fall into a **moderate performance category**."

Business Insights:-

The average rating of 6.57 indicates that most movies perform at a moderate level, with few exceptional performers. Interestingly, despite this moderate rating, the portfolio generates very high revenue, suggesting that commercial success is not solely dependent on critical ratings."

Total Directors

2349

Insights of Total Directors:-

The dataset includes 2,349 directors, indicating a **highly diverse director base**."

Business insights:-

The dataset includes 2,349 directors compared to only 47 movies, indicating a highly sparse distribution where only a small number of directors are actively contributing. This suggests that the industry relies heavily on a few key directors, while many remain underutilized, creating opportunities for better talent management and strategic selection

Slicers Insights :-

Years

1997

2016

Insights of Years :-

• Between slicer (1997 → 2016) :-

Function:

"It allows users to filter all visuals dynamically based on a selected year range."

Business Insights:-

I used a 'Between' slicer on the year field to enable dynamic time-based analysis. This allows users to filter the dashboard for specific periods and analyze trends in movie production, revenue, and performance over time.

The year slicer enables dynamic time-based analysis by allowing users to filter the dataset across different periods. By selecting specific year ranges, users can observe how movie production, revenue, and performance trends change over time. This helps in identifying growth phases, peak production periods, and fluctuations in the industry. Additionally, it allows comparison between different time periods to understand how factors like budget efficiency, audience preferences, and director performance evolve. Overall, the slicer enhances interactivity and supports deeper, data-driven insights into temporal trends in the movie industry

Total Budget, Total Revenue and Sum of popularity by original_title

Total Budget, Total Revenue and Sum of popularity by original_title

insight of scatter plot :-

X-axis = Total Budget

• Y-axis = Total Revenue

• Bubble size = Popularity

There is a clear blockbuster outlier

One movie has around **0.25bn budget** but generates close to **3bn revenue**.

Insight:

A single movie is performing far above the rest.

Business Analysis:-

1.Higher budget does not always guarantee higher revenue

Some movies with budgets near **0.2bn to 0.3bn** are producing only moderate revenue, while another movie with a similar budget performs much better.

2.There are high-efficiency movies

A few movies with relatively moderate budgets are generating strong revenue compared to their cost.

3.Most movies are clustered in the mid-budget range

Most bubbles are concentrated around **0.18bn to 0.28bn budget**

4.Revenue spread is wide even within similar budget ranges

At nearly the same budget level, some movies stay below **1bn revenue**, while others cross **1.5bn or even 2bn**.

5.Popularity does not perfectly match revenue

Some bigger bubbles are not the highest on revenue.

This scatter plot shows the relationship between budget and revenue for each movie. I observed that there is a clear blockbuster outlier generating exceptionally high revenue from a moderate budget. At the same time, movies with similar budgets deliver very different revenue outcomes, proving that higher budget does not guarantee success. This highlights the importance of efficient investment and identifying the factors behind high-ROI movies."

Total Revenue by Director

Total Revenue by name

Insights of bar chart:-

1. James Cameron Dominates

~**4.6bn revenue** (highest by far)

"James Cameron is the top-performing director, generating significantly higher revenue than others."

2. Joss Whedon → ~2.9bn

- Peter Jackson → ~2.5bn

"There is a large gap between the top director and the rest."

3. James Cameron

- Joss Whedon
- Peter Jackson

"A small number of directors contribute a large share of total revenue."

4. Mid-Level Directors Cluster

Directors between:

- ~1.9bn to ~2.2bn revenue

"Several directors perform at a similar mid-range level."

Business insights:-

1. Revenue is concentrated among a few top directors
2. Director choice has a major impact on movie success.
3. The industry relies heavily on a small number of high-performing directors

This chart shows revenue contribution by directors. James Cameron clearly stands out as the top performer, generating significantly higher revenue than others. There is a noticeable gap between the top director and the rest, indicating that the industry is highly dependent on a few key directors. Additionally, while some directors consistently deliver mid-level performance, only a few drive major revenue, highlighting the importance of strategic director selection."

Total Movies by years:-

Total Movies by years

insights:-

1. Very Low Production in Early Years :-

Before ~2005 → mostly **1 movie per year**
"Movie production was very low and stable in the early years."

2. Growth Starts After 2005 :-

Around 2005–2010:
• Movies increase from **1 → 3 → 6**
"There is a clear growth phase in movie production after 2005."

3. Peak Production Around 2013–2014 :-

Highest point:
• Around **9 movies in a year**
"Movie production reached its peak during this period."

4. Sudden Drops After Peak :-

After peak:
• Drop to **2 movies**, then slight recovery, then drop again
"Production is not consistent and shows fluctuations."

5. Fluctuating Trend Overall :-

Pattern:
• Up → Down → Up → Down
"The production trend is unstable rather than steadily growing."

Insights :-

This line chart shows the trend of movie production over the years. Initially, production was very low, with only one movie per year. After 2005, there is a clear growth phase, reaching a peak of around nine movies. However, the trend is not stable, as there are noticeable fluctuations in later years, indicating inconsistency in production strategy."

Total Revenue by Movies

Total Revenue by original_title

Insights:-

1.Avatar is the Top Performer:-

~**2.8bn** revenue

"Avatar is the highest revenue-generating movie in the dataset."

2.Titanic is the Second Highest :-

👉 ~**1.8bn** revenue

"There is a noticeable gap between Avatar and the next movie."

3.Revenue is Concentrated (VERY IMPORTANT):-

Most movies:

- Between **1.1bn – 1.5bn**

"Revenue is concentrated within a narrow range for most movies."

4.Small Gap Among Mid-Level Movies:-

Movies like:

- Jurassic World
- Furious 7
- Avengers

All around **1.5bn**

"Many movies perform at a similar revenue level."

5.Lower Tier Still Strong:-

Even lowest:

- ~**1.1bn** revenue

"Even the lowest-performing movies generate high revenue."

6.Franchise Movies Dominate

Most movies are:

- Avengers
- Jurassic World
- Iron Man
- Transformers

"Franchise-based movies dominate the revenue list."

This chart shows the top revenue-generating movies, where Avatar clearly stands out as the highest performer. There is a noticeable gap between the top movie and others, indicating revenue concentration. Most movies fall within a similar revenue range, suggesting a competitive market. Additionally, many of these are franchise movies, highlighting the importance of sequels and brand value in driving revenue."
